Montana Communicable Disease Weekly Report: 7/3/09

Summary – Week 25- Disease reports received at DPHHS June 21-27, 2009 included campylobacteriosis, cryptosporidiosis, giardiasis, salmonellosis, rabies in a skunk, Rocky Mountain Spotted Fever and varicella. (There have been 9 confirmed or probable cases of Rocky Mountain Spotted Fever to date in 2009 compared to 0 cases in 2008 and 2007).

Summary – Weeks 23, 24- Disease reports received at DPHHS June 6 – June 20, 2009 included campylobacteriosis, *E. coli* 0157, giardiasis and salmonellosis, tick-borne RMSF, bacterial meningitis (NOT meningococcal), invasive *S. pneumoniae* (adults), acute hepatitis A in a traveler, malaria in a traveler and varicella. (One case of *E. coli* hemolytic uremic syndrome reported week 22 is associated with the national outbreak related to Nestle Tollhouse cookie dough; the person has recovered).

Influenza Surveillance – As of July 2, 2009, Montana is reporting 72 laboratory confirmed cases of novel influenza A (H1N1), 4 hospitalizations and no deaths in 17 counties. >90% of positive influenza A PCR tests are now novel influenza A H1N1. It is anticipated that cases will continue to occur over the next few weeks.

HIV - The number of new HIV diagnoses is 19 as of June 2009, which is close to the average number of cases seen in a whole year. Many of these new diagnoses were later in the course of disease, when therapy is less effective.
